

Medications not on Formulary

Any medication that is not listed in the Drug Formulary is considered a non-formulary drug. If your doctor feels that you should be prescribed a medication that is not on the Drug Formulary, please ask your doctor to complete the Medication Prior Authorization Request Form and submit it to Cascade Health Alliance. Your doctor must also include all supporting documentation with the request. CHA's clinical team will review the request and grant an approval if a documented medical need exists. In some cases, the clinical team may recommend a different medication or deny the request for medical appropriateness.
